

How To Use the Fagron Click Container

1. Remove the lid.

2. Turn the base 180° so it lines up with the tube. You will hear a click. That is 1 click. Use the number of clicks prescribed by your doctor.

3. The cream will emerge at the top of the applicator pad. Apply the treatment by rubbing it onto the area of the skin as directed.

4. Prevent evaporation of next dose by snapping the cap on completely.

5. Once the plunger reaches the raised line, reorder your cream. Lid will pop off two clicks later, allowing you access to last of the cream.
